

Implementing Activity Based Costing – Remote Consulting Services

How It Works:

Our unique “remote consulting” package provide the same business advisory and consulting expertise you would receive with a traditional onsite visit – at a substantially lower cost.

We provide you with the tools that will allow you to easily begin to collect the data and information that we will need in order to assign costs to activities within your core business processes. In addition to data, we also request information relating to products, staffing, volume, productivity, delivery models, and general business operations. The data and information collection tools are well-designed and easy-to-understand.

While most of the data and information requirements will be provided using our tools, we generally require 1-2 phone calls with selected leaders to discuss processes, activity, and costs, etc. In addition, we may also schedule live web-based meetings as needed.

Continued Support:

We provide ongoing support via telephone and e-mail for a full year. This is important as many providers that attempt to implement activity based costing tend to surface questions as they get deeper into the implementation phase – we can help you take the guess work and provide you with an accelerated approach to implementing ABC.

Deliverables:

Our activity based costing consulting services is designed to provide you with:

- Customized data/information gathering tools designed specifically for HME providers
- The assignment of costs to core processes and specific activities based on volume
- Establishing a ABC foundation or “baseline”
- Assessment of costs associated with key product lines and services
- Identification of all costs - *direct* and *indirect* - and their impact on activity, tasks, and processes
- An ABC model that will be self-sustaining
- Process, workflow, productivity improvement recommendations as appropriate
- Complete activity based costing assessment and report (30 -45 days turnaround time)

Cost:

\$599 – this cost includes all of the tools required to gather and assess your data and information. The cost also includes access to ongoing, live support and advisory services for one full year (support is provided via the phone and/or via e-mail).
